Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Goodman 2776673, that teaches the invention as claimed: a valve in form of a variable flow restrictor (note that any flow through a valve produces a thrust, and a valve regulating the flow inherently regulates the thrust) comprising: a nozzle 20, a gas supply chamber on the upstream left side of the connecting channel 20, a jetting chamber on the downstream right side of the connecting channel 20, an axially moveable plug along line 32-32' having a converging - diverging surface comprising a substantially straight connecting part in-between (mathematically speaking this is a must, because the tangent to the surface there has a zero slope), the faces of the plug facing the inner surfaces of the two said chambers, the axial motion of the plug simultaneously changing sectional areas of upstream and downstream passages formed between the surface of the plug and the inner surfaces of said two chambers; wherein the interaction between the flow pressure and the converging surface of the plug produces a force in the upstream left side direction, and the interaction between the plug and the diverging surface of the plug produces a force in the downstream right side direction; wherein the downstream diverging surface of the plug is inclined away of the plug axis in a downstream direction and the upstream converging surface of the plug is inclined away

of the plug axis in an upstream direction; whereas the downstream diverging surface of the plug is a first surface approaching the inner surface of the downstream chamber, and the straight surface of the plug is inclined so as to separate from the inner surface of the downstream chamber, because two parallel surfaces never intersect.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Beardsley 3948042, Hole 2590318, Vogeli 3503585.
